-!- SUBCELLULAR LOCATION: Secreted protein.
-!- TISSUE SPECIFICITY: Expressed in many tissues including heart, spleen, lung, liver, muscle and kidney (at mRNA level). Expressed in many tissues including heart, spleen, lung, liver, muscle and kidney (at protein level).
-!- SIMILARITY: Belongs to the IL-15 family.
                                                                                                                                                                                                                                                                                                                                                                        CHAIN

This represents a MU-1 hematopoietin receptor protein. The protein can be produced by standard recombinant methodology. The MU-1 protein has the biological activity of the MU-1 hematopoietin receptor superfamily chain. It is used to screen for specific binding agents, to raise specific antibodies; as assay reagents, tissue markers etc. and therapeutically (optionally expressed from the MU-1 gene by gene therapy). Many possible activities/uses of the MU-1 protein are described without supporting evidence, e.g. they regulate cell proliferation and differentiation, induce production of cytokines, stimulate or suppress an immune response

Claim 9; Page 33-35; 37pp; English.

New nucleic acid encoding the MU-1 hematopoietin receptor protein, used for treating e.g. cancer, autoimmune disease or abnormal hematopoiesis.

WPI; 1999-562115/47.

N-PSDB; AAZ07535.

The MU-1 gene is used as a research reagent, for recombinant production of the protein, as tissue or molecular weight marker, for gene mapping, for production of anti-DNA or anti-protein antibodies etc. The MU-1 protein and the nucleic acids are also useful as nutritional supplements or sources and the antibodies can be used therapeutically, as assay reagents and for affinity purification

                                                                                                                                                                                                                                                                                                    The present sequence represents a human zalphall ligand polypeptide, combich is a cytokine. The zalphall ligand is useful for stimulating the proliferation and development of haematopoietic cells in vitro and in cytov. Zalphall ligand polynucleotides can be used as primers or probes for cloning the zalphall gene. The zalphall ligand is useful for treating thuseness. Antagonists against zalphall ligand reacting tracting leukaemias and lymphomas. Antagonists against zalphall ligand care useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in cregulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polynucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, prevention, and treatment of diseases associated with a zalphall ligand
                                                                                                                                                                                                                                     Matches

It is expressed at high levels in spleen, thymus, peripheral blood leucocytes and lymph nodes and moderately in heart and placenta. It has a role in immune system and cytokine function. It is useful in screening for cognate ligands or drugs that mediate survival and differentiation of cells expressing this receptor. Modified HUMAN OCR10-A or its agonist can be used in the treatment of endocrine or

Antibodies to the NR8 family proteins are us for the diagnosis of blood formation disorders. Compounds identified a binding to the proteins are used for the treatment of such disorders

The present sequence is that of zalphall, a novel human class I cytokine creciptor that may be involved in an apoptotic cellular pathway, or is a cell-cell signalling molecule, growth factor receptor, or extracellular cmatrix associated protein with growth factor hormone activity. The spinal cord library. Polypeptides comprising amino acids 20-237, 20-255, 20-358, 20-538 and 1-538 of the present sequence are claimed. Zalphall is expressed in lymph node, peripheral blood leucoytes, spleen and chymus. The manka is also abundant in the Raji cell line (ATCC CCL 86) cderived from Burkitr's lymphoma. Zalphall polypeptides, and fusion proteins including them, can be obtained by expression in recombinant thost cells. They are used: to detect ligands (also ligand agonists and can tagonists) that stimulate proliferation and/or development of the areplacement for serum in culture media; in soluble form to block ligand cartivity (direct antagonists) and to detect ligand-expressing cancers; to raise specific antibodies; and for purification of cognate ligands. Agonistic ligands may stimulate cell-mediated immunity, e.g. for treating cartivity of vaccines, suppressing tumours, treating leukopenia and comproving The samulate cell-mediated immunity, e.g. for treating care set in section as secociated with immunosuppression, improving the associated with immunosuppression, improving the cartivity of vaccines, suppressing the marrow transplant. Antagonists of disease (e.g. rheumatoid arthritis, multiple sclerosis, diabetes), to prevent transplant rejection and to treat T-cell leukemia or lymphoma company transplant rejection and to treat T-cell leukemia or lymphoma company transplant rejection and to treat T-cell leukemia or lymphoma company transplant rejection and to treat T-cell leukemia or lymphoma company transplant tr

          The invention relates to isolated human and murine interleukin-9 (IL-9), IL-2 receptor-like polypeptides. The plasmid containing the encoding cDNA insert is deposited as ATCC PTA-350. The IL-9/IL-2 receptor-like polypeptides (16445 proteins) can be recombinantly produced using standard recombinant methodology. The 16445 proteins are used for identifying their modulators and for diagnosis and treatment of immune, inflammatory and respiratory disorders and disorders associated with lungs, colon, kidney and lymphoid tissues including tonsil and thymus, particular T-lymphocyte-related disorders including atopic conditions such as asthma, allergy, rheumatoid arthritis, psoriasis, chronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the colon such as diarrhoea, dysentery, infectious enterocolitis, kidney disorders including polycystic kidney disease, cystic renal dysplasia, disorders of the thymus including lymphomas, Hodgkin disease and carcinoids. The 16445 polypeptides are also useful as modulating agents in cellular processes including growth promoting activity, particularly the antigen-independent proliferation of Thelper cell clones. The encoding nucleic acid is useful as primers or hybridization probes for the detection of IL-9/IL-2 receptor-like encoding nucleic acids and for tissue typing and in forensic biology. The present sequence represents the human IL-9/IL-2 receptor-like polypeptide (AAH16445)

```
cc polypeptide, 16445. The 16445 polypeptides can be expressed by standard cc recombinant methodology. The 16445 polypeptide, polypucleotides and their cc modulators are useful for modulating the immune, inflammatory and cc respiratory responses, for the diagnosis and treatment of immune and cc respiratory disorders, particularly the immune, inflammatory and cc respiratory disorders, including, atopic conditions, such as cc lymphocyte-related disorders, including, atopic conditions, such as cc asthma and allergy, including allergic rhinitis, psoriasis, the effects cof pathogen infection, chronic inflammatory diseases, organ-specific cc autoimmunity, graft rejection, and graft versus host disease. The collectules are also useful as modulating agents in a variety of cellular cc independent proliferation of T helper cell clones, and direct effects on crall haemopoletic progenitors, human T cells, B cells, thymocytes, chymic lymphomas and neuronal cell lines. They are useful for the condulation, diagnosis, and treatment of immune, inflammatory, and creppiratory disorders and disorders associated with lungs, colon, kidney, and lymphoid tissues including tonsil and thymus. The present sequence crepresents a human 16445 polypeptide
                                                                 δ

The present invention relates to a new murine MU-1 protein, a CC haematopoietin receptor superfamily chain, comprising a fully defined CC sequence of 529 amino acids (AAUJ1915) as given in the specifications or CC fragment of protein having MU-1 biological activity. The molecules of the CC invention may exhibit cytokine, cell proliferation or cell convention activity and may also exhibit immune stimulating or CC immune suppressing activity and can be useful in the treatment of various immune deficiencies and disorders including severe combined CC immunodeficiency (SCID). Another use of the invention is treating CC sulcommune disorders such as connective tissue disease, multiple CC sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune CC is useful for the treatment of mysloid arthritis, insulin dependent CC is useful for the treatment of mysloid or lymphoid cell deficiencies and cin treating various anaemias or for use in conjunction with cCC irradiation/chemotherapy to stimulate the production of erythroid can procursors and/or erythroid cells. The polynucleotides and proteins can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В

                                                                                                                                                                                                                                                                    lymphoid cells which are natural killer cells or cytotoxic T cells. Zalpha is useful for treating immune and inflammatory disorders, for reducing proliferation of neoplastic B or T cells, for suppressing an immune response in a mammal exposed to an antigen or pathogen. Zalpha is useful for treating diseases that require immune regulation including autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, myasthenia gravis, systemic lupus erythematosus (SLE) and diabetes; asthma, ulcerative colitis, inflammatory bowel disease, Crohn's disease, sepsis, viral infection (dengue virus infection) and cancer. The present sequence is human soluble Zalphall cytokine receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated soluble zalphall cytokine receptor polypeptide and their cDNA molecules. Zalpha proteins are useful for inhibiting or antagonising the ligand activity-induced proliferation of haematopoietic cells and haematopoietic cell progenitors preferably lymphoid cells which are natural killer cells or cytotoxic T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel soluble receptor polypeptides and polynucleotides used as cytokine antagonist for stimulating ligand activity-induced proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-APR-2000;
